DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

-
2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 3-179672, and further in view of JP 62-279264 and JP 4-325401 or Verrill et al (US 5,938,800).

JP '672 discloses an apparatus for producing hydrogen by a steam reforming reaction, on a catalyst, of a hydrocarbon as raw material comprising a hydrogen separation type reformer which has a means for heating and a hydrogen separation membrane and a hydrogen charge/discharge means and a pressure regulating means (abstract).

Art Unit: 1725

JP '672 fails to disclose a fluid for cooling the hydrogen via a heat exchanger and wherein the hydrogen charge/discharge is a hydrogen storing alloy.

Jp '401 discloses using a heat exchanger to improve a gaseous hydrogen generating efficiency and to decrease required energy in the gaseous hydrogen production by steam reforming (abstract).

Therefore, it would have been obvious to one of ordinary skill in the art at the time applicant's invention was made to provide a heat exchanger as taught by JP '401, in JP '672 in order to improve efficiency.

In addition, Verrill et al disclose cooling the hydrogen to free of impurities (col. 3, lines 46-50). Therefore, it would have been obvious to one of ordinary skill in the art at the time applicant's invention was made to cool the hydrogen as taught by Verrill et al, in JP '672 in order to free of most impurities.

JP '264 discloses a storing means comprise of a metal hydride to maintain the hydrogen occluding performance of metal hydride for a long time by providing a palladium group separating film for allowing gas to permeate close to a reforming device.

Therefore, it would have been obvious to one of ordinary skill in the art at the time applicant's invention was made to have a storing mean being a metal hydride as taught by JP '264, in JP '672 in order to maintain the hydrogen occluding performance.
